OPHTHALMOLOGY

AQUA LASIK® is designed to correct a wide range of refractive errors, helping you achieve clear, stable vision.

### Spa-like Refractive Treatment

#### Comfort For Your Eyes

AQUA LASIK® keeps your eyes naturally hydrated during surgery, designed to reduce dryness and enhance comfort compared to traditional LASIK procedures.

#### Oderless and Quiet Treatment

Advanced technology creates an odorless and quiet environment, helping you feel at ease throughout your treatment.

#### Precise & Predictable Vision

Water-friendly wavelength aims for consistent results regardless of your corneal hydration level, so you can enjoy clear vision with confidence.

## Your AQUA LASIK® procedure

The goal of AQUA LASIK surgery is to improve your vision by reshaping the cornea. Changing the cornea's shape adjusts its focusing power, helping your eye see clearly without the need for glasses or contact lenses.

01

#### Personal Consultation & Eye Mapping

During the consultation with your doctor, a personalized treatment plan is made after measuring and examining your eyes.

02

#### Flap Creation

In the treatment room, numbing eye drops ensure a painless experience. A femtosecond laser will then create a precise corneal flap.

03

#### Corneal Reshaping

The flap is gently lifted, and a solid-state laser reshapes the cornea to improve the way light is focused, giving you clearer vision.

04

#### Flap Repositioning & Fast Recovery

The flap is carefully repositioned, and a soft, bandage-like contact lens may be applied. The flap will then begin to seal naturally without stitches. Vision usually improves within 24 hours.

## Could AQUA LASIK® be right for you?

### LASIK is best suited for people who:

Can't take much time off from work or daily activities

Want quick results with clear vision

Have sufficient corneal thickness

### Advantages:

Fast recovery & sharp vision soon after surgery

The gold standard of laser vision correction

Stable and predictable outcomes\*
